CheckIn

Daily Work Report — Supervisor Feedback & Release v1.2

Student Attendance System · IDE201 Capstone · Group 2 · College of Science and Technology

Contributor	Ugyen Norbu (GitHub: UgayNobu)
Role	Database manager; backend; repository owner
Date	Tuesday, 27 October 2026
Repository	github.com/UgayNobu/Checkin (branches: dev and main)
Pull requests	#48 (team merge), #49 (revert), #50 (into dev), #51 (release to main) · tag v1.2

1. Summary

After our meeting with sir, I made every change he asked for on my VLE branch: the tutor timetable, the Start Attendance form, the student notification bell and settings, admin-created tutor accounts, a new admin programme page, cancelled classes, the log-out page and the login pages. I also fixed an attendance bug where students who enrolled late were counted absent for classes held before they joined.

On the repository side, I first merged Dechen's and Sanskar's branches into dev as the team asked (PR #48). When the team then decided to use my version instead, I removed that merge (PR #49, a revert), merged my work into dev (PR #50) and released it to main (PR #51), tagged v1.2. The test data and extra test accounts were cleaned out of Supabase.

9	4	26	0	v1.2
commits today	pull requests merged	files changed	database schema changes	released to main

2. Changes from the supervisor meeting

#	Page	What changed
1	Tutor › Timetable	Each class shows who it is for (programme and year, e.g. "Software Engineering · Year 2") instead of repeating the tutor's own name.
2	Tutor › Start Attendance	"Where students must be" comes first; the Room list then only shows rooms in that building (Workshop keeps a free-text room). Rooms from the timetable still fill in on their own.
3	Student › every page	The notification bell is on every page, shows a red dot for new notifications, opens on hover, stays open while the cursor is on it and marks them read when viewed.
4	Student › Settings	Proper icons on the links. Three switches that did nothing were replaced by one working "Email notifications" switch.

#	Page	What changed
5	Admin › Home	"+ Add tutor" creates a tutor account with a default password (Tutor@2026, changeable in .env). Tutors not in the system can still sign up and wait for approval.
6	Admin › Program / Module	Clicking a programme shows every year and semester with its modules, tutors and student counts. The admin can rename or remove the programme and add, edit or remove modules there.
7	Timetable (all)	Cancelled classes are dimmed instead of struck through, so classes that run stand out.
8	Log out (all roles)	Goes back to the landing page instead of the student login.
9	Login / sign-up / forgot password	Same look as the landing page: full-screen photo, big heading, frosted card. Student pages blue, tutor pages teal.

2.1 Bug fixed: late enrolment counted as absent

When a class closes, every student enrolled at that moment who did not check in is marked Absent. A student who enrolled later had no record for the earlier classes, but the system still counted those classes as missed, which caused the red calendar days and low percentages we saw in IDE202.

- **New rule:** a class only counts for a student who has a record in it. Classes held before someone enrolled are left out of their percentage, calendar and records (student, tutor and management views).
- **Tested:** a student made to look like a late joiner showed two red days and 7 classes before the fix, and no red days and 5 classes after it.

2.2 Rules kept safe

- Removing a programme is refused while it still has modules, students or timetable classes.
- Removing a module deletes it only if no other programme uses it and it has no attendance history; otherwise it is only taken out of that programme.
- Only the admin can create tutors; duplicate staff IDs and non-college emails are refused, and a tutor already waiting in Tutor requests is pointed there.

3. Repository: merges and release

PR	Into	What it did
#48	dev	Merged Dechen's Next.js branch and Sanskar's ui-fixes, as the team asked (Sanskar's profile photo kept, Dechen's version for the rest).
#49	dev	Reverted #48 after the team decided to go with my version. dev went back exactly to how it was before (checked: 0 lines different).
#50	dev	Merged my branch feature/vle-theme (19 commits): the VLE redesign plus all of today's changes.
#51	main	Released dev to main; tagged v1.2. main and dev are now identical.

Teammates' branches are still on GitHub, so nothing of their work is lost if we need it later.

4. Database clean-up (Supabase)

Both scripts were run in the Supabase SQL editor with a preview step first, inside one transaction, and tested on a local copy of the database beforehand. No tables or columns were changed.

Script	Result
cleanup_testing_data.sql	Removed all test attendance, check-in codes, sessions, class changes, absence requests (and their files), notifications, and the fake programme “lama moduoe”. Enrolments and tutor assignments kept.
keep_initial_users.sql	Kept 6 accounts: CST-ICT01 (admin), CST-MGT01 (management), CST-0142 and CST-0143 (tutors), U004 and 02240357 (students). Every module kept its tutor.

5. Checked today

- Forgot password end to end: code emailed, wrong code refused, right code changes the password, code cannot be reused, unknown IDs get the same message.
- Email settings (Gmail SMTP) in backend/.env: the backend logs “Email ready”. Students get emails for low attendance, absence request results and password changes; the reset code is always emailed.
- Every change above was tested in the browser with screenshots on laptop and phone sizes, and the backend routes were tested directly.

6. For the team: get the latest version

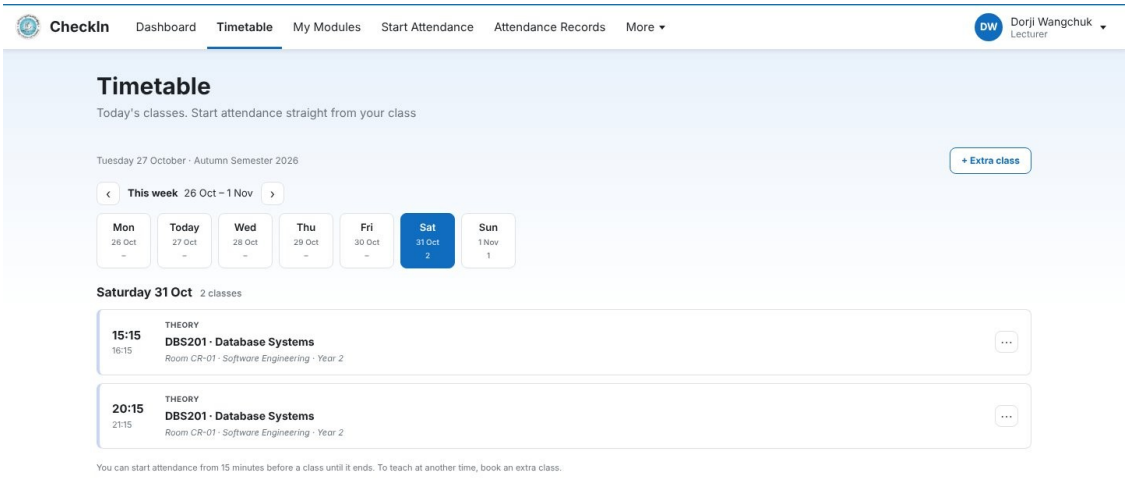

main and dev both have v1.2. The frontend is Vite again (localhost:5173), not Next.js.

Step	Command / action
1. Get the code	git checkout dev then git pull origin dev
2. Frontend	cd frontend then npm install then npm run dev (opens on localhost:5173)
3. Backend	cd backend then npm run dev (restart it; no new packages and no database changes)
4. Settings	frontend/.env keeps VITE_API=http://localhost:5001/api; frontend/.env.local from the Next.js version can be deleted
5. New work	Make a new branch from dev and open a pull request into dev

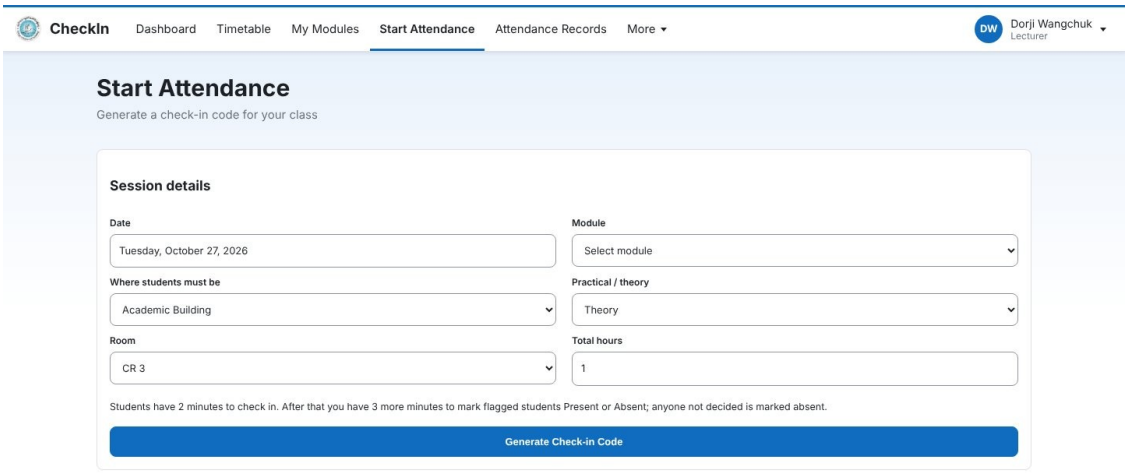

7. Next steps

- Team tests v1.2 on phones in a real class: start attendance, check in, flagged review, an automatically cancelled class.
- Fix the Spring 2027 semester dates in Supabase (the old row overlaps Autumn 2026).
- Assign real tutors to the remaining modules for this semester.
- Update the README with automatic cancellation, admin-created tutors and the programme page.

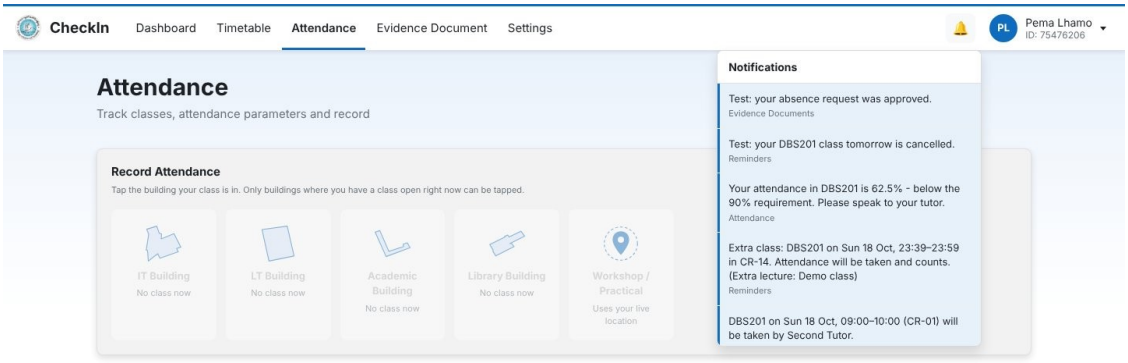

Appendix A: Screenshots

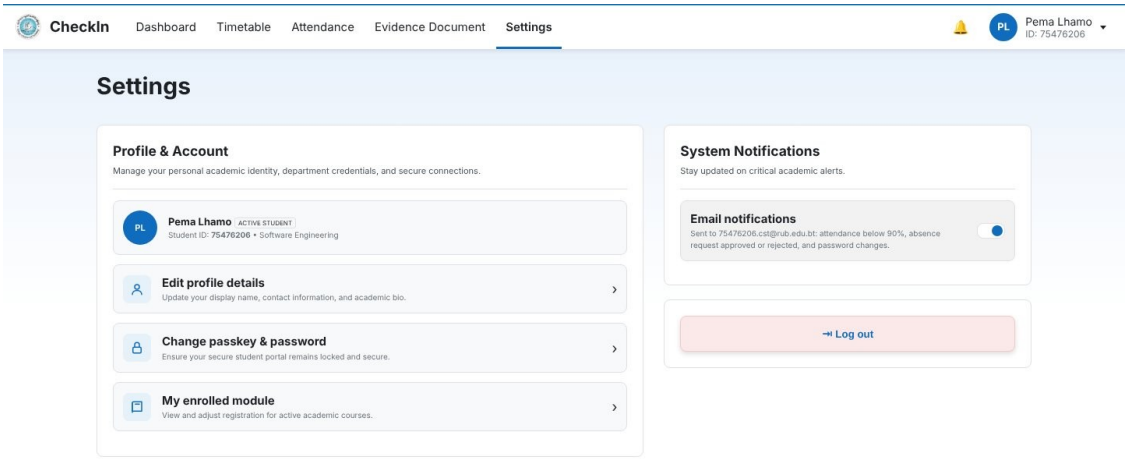

Tutor timetable — programme and year instead of the tutor name

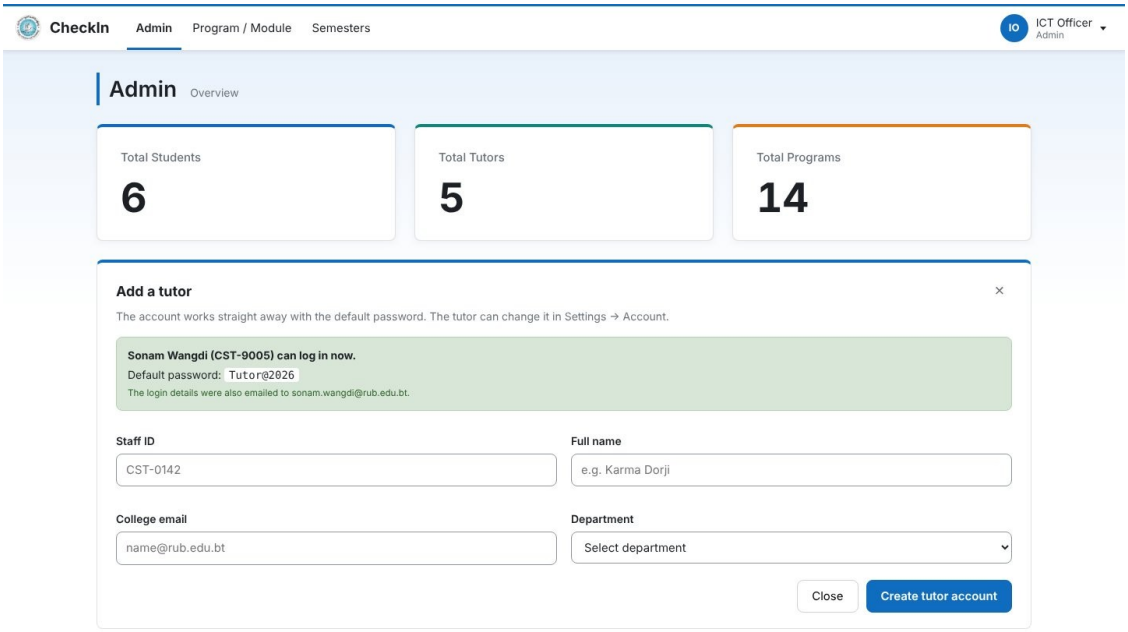

Start Attendance — building first, then a room in that building

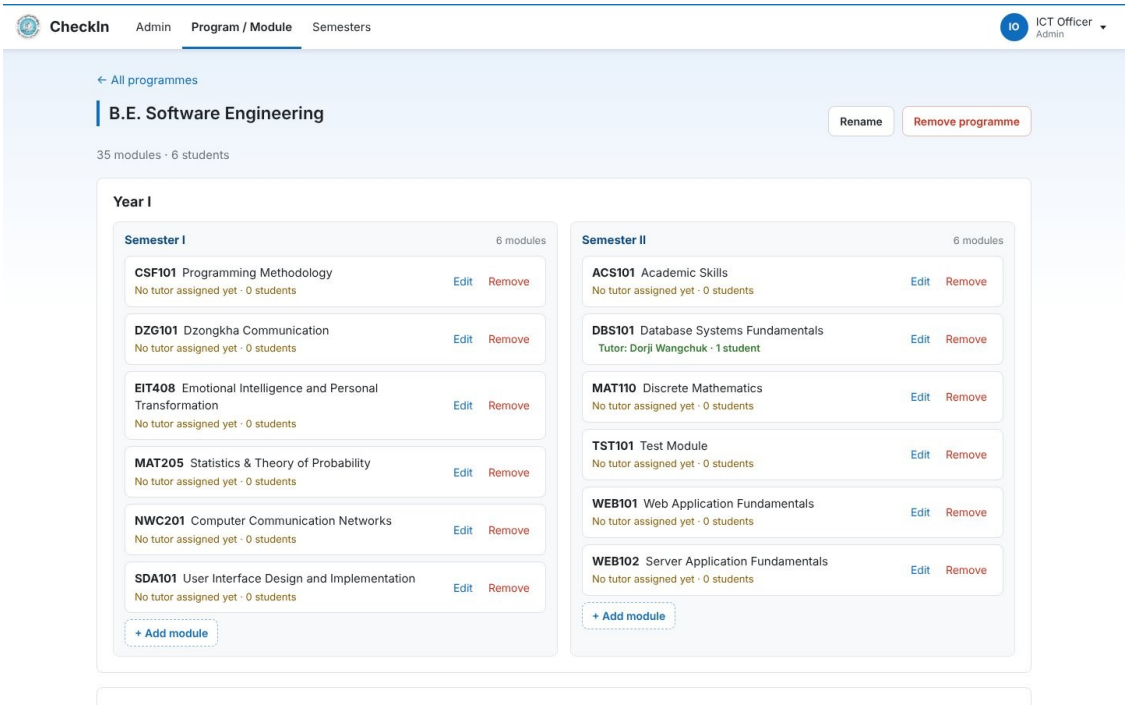

Student notification bell on every page

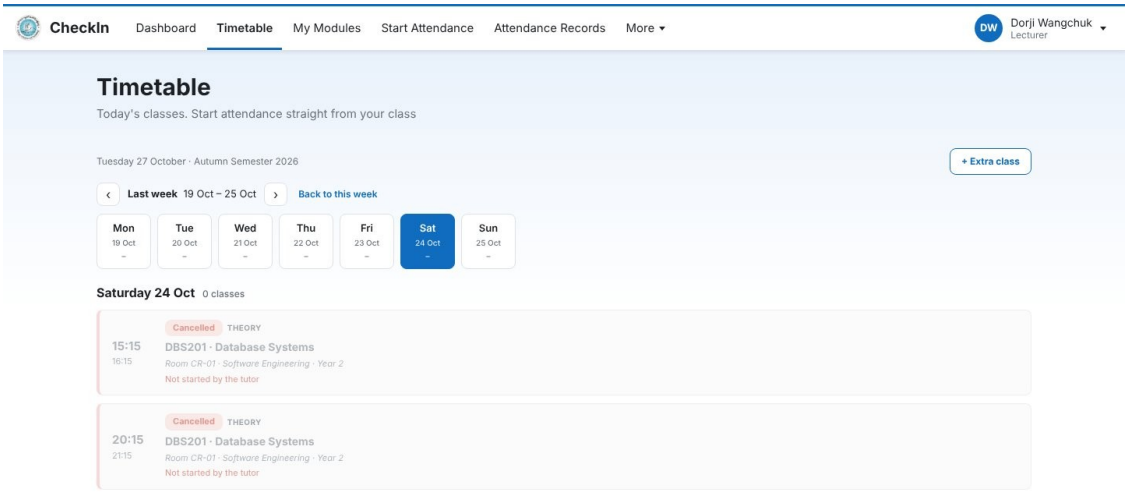

Student Settings — icons and one Email notifications switch

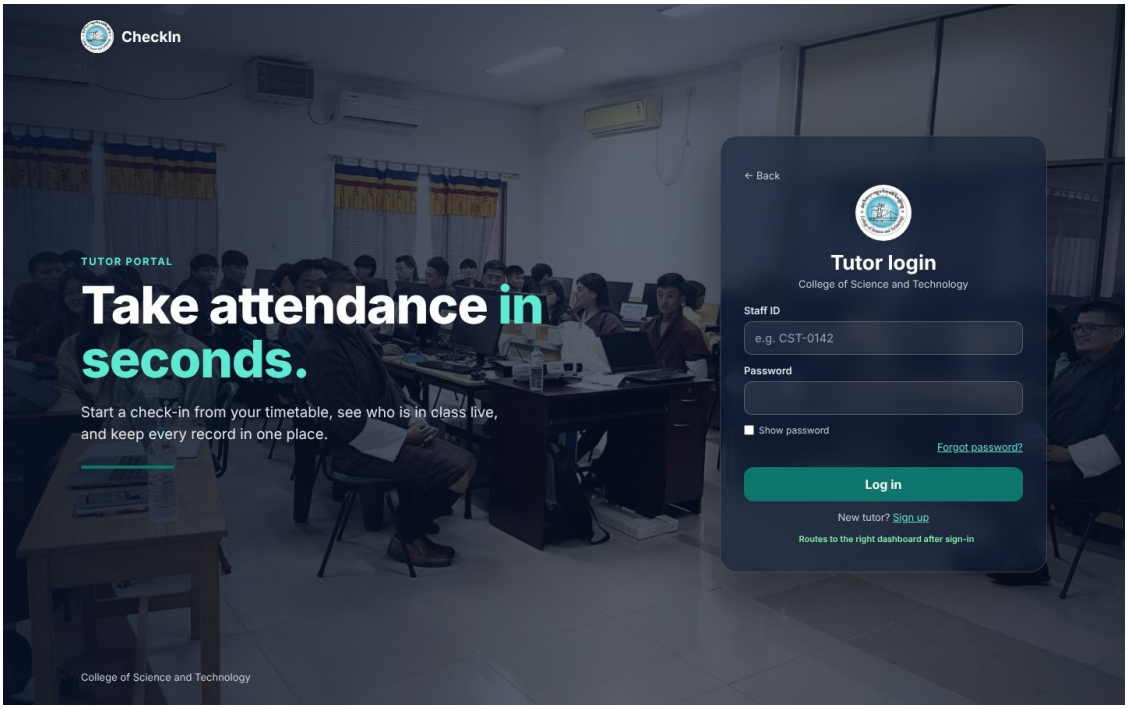

Admin — Add a tutor with the default password

Admin — programme page with years, semesters and modules

Timetable — cancelled classes dimmed

Tutor login in the landing-page style

Appendix B: My commits today

Time	Commit	Description
03:48	6eeba45	Tutor timetable: show the class (programme and year) instead of the tutor's own name
03:54	ce07c8b	Start Attendance: choose the building first, then a room from that building
04:03	4ba913e	Student notification bell on every page: red dot, opens on hover, marks read when viewed
04:09	403407f	Student Settings: icons; one working Email notifications switch
04:22	12ded41	Admin can create tutor accounts with a default password; self sign-up with approval still works
04:44	5269d07	Attendance: classes held before a student enrolled no longer count as absent
04:47	60d7161	Timetable: cancelled classes are dimmed instead of struck through
04:52	3c16525	Admin programmes: years, semesters and modules; rename/remove programme, add/edit/remove modules
05:03	f1f4bb5	Log out goes to the landing page; login, sign-up and forgot password match the landing page
