CheckIn: Changes Made Today (28 Oct 2026)

Oct 28, 2026 · @Dechen

Summary

Today the student profile photo was made to work end to end: it now uploads, shows on Edit profile and Settings, and appears in the top-right corner for students and teachers. The Admin programme page also lost its extra Back button. The work is 5 frontend files in one commit on the branch `photo-fix`, with a pull request into `dev`.

Profile photo fix

The photo failed for four separate reasons, each fixed in turn.

Problem seen	Cause	Fix
Change photo did nothing	The button had no `onClick` after a teammate's update replaced the earlier code	Added a hidden file picker and an upload to `/me/avatar`, the same route the teacher profile already uses (PNG, JPG or WEBP, up to 2 MB)
Save changes seemed not to click	Errors from the backend were not shown, so a rejected save looked like nothing happened	Save, upload and remove now show a green success or red error message, and buttons say "Saving…" while busy
Photo showed as a broken image	Vite forwarded `/api` to port 5001, but the backend runs on port 5000 (`ECONNREFUSED`)	Changed the proxy target in `vite.config.js` to `http://localhost:5000` and also forwarded `/uploads`
Broken image right after uploading	The page kept showing the old photo address, which the backend deletes when a new photo is uploaded	After upload, the page reloads `/me` to get the fresh photo address

The top bar in `App.jsx` now loads the latest profile on each page change, so the photo and name update straight after saving. A **Remove** button returns the circle to initials.

Other changes

- **Admin programme page:** removed the "< Back" button above the programme title. Admins use the top menu or the browser's back button instead.
- **Settings buttons:** the grey buttons on Edit profile now darken and lift slightly on hover, and look faded while an upload or save is running.

Files changed

File	What changed
`frontend/src/pages/student/Settings.jsx`	Working Change photo, Remove, and Save with messages; photo shown on Edit profile and Settings
`frontend/src/pages/student/settings.css`	Hover and disabled styles for buttons; photo fills the circle
`frontend/src/App.jsx`	Top bar and phone menu show the profile photo and latest name
`frontend/vite.config.js`	Proxy target changed to port 5000; `/uploads` forwarded too
`frontend/src/pages/admin/ProgramView.jsx`	Back button removed

No backend files changed today.

Git and pull request

The changes are in commit `6eb1fee` ("Fix profile photo (avatar upload, top bar, proxy port 5000), remove admin Back button") on the branch `photo-fix`, pushed to GitHub. Because `dev` only accepts pull requests, the work goes in through a pull request from `photo-fix` into `dev`. The two `package-lock.json` files and `.env` were left out of the commit.

Follow-ups

- ☐ Create the pull request (`photo-fix` → `dev`) and get a teammate to review and merge it
- ☐ After the merge, everyone pulls `dev` and restarts the frontend (`npm run dev`), because `vite.config.js` changed
- ☐ Reset the Supabase database password and the `JWT_SECRET`, since they were shared outside the team, then send the new values to teammates privately
- ☐ Check `NETWORK_GRACE_SECONDS=1ms` in `backend/.env`: it should be a number of seconds (the design uses 120)
- ☐ Test: Edit profile → Change photo → check the photo on Settings and the top bar → refresh

Attendance percentage is one overall figure per module, combining theory and practical and weighted by hours. This is the number used for the 90% rule; the per-type boxes on the student module page are for information.
