CheckIn -- Progress Report

Oct 11, 2026 · @Frontend Team

Summary

This round focused on modularizing the frontend codebase and refining the Management and Teacher interfaces. We broke down large monolithic files into smaller, maintainable components, split the CSS architecture for better scoping, and improved user experience with a clickable profile header. The Admin section was removed based on updated project scope.

- **Clickable Profile:** The top-right header (avatar and name) is now clickable, routing users to their respective profile pages based on their role.
- **Management Refactor:** The massive Management component was split into four logical files: Overview, Module, Teacher, and History, each with its own CSS.
- **Teacher Adjustments:** The search bar was removed from the top header, and the "Section" input field was removed from the Start Attendance form.
- **Placeholder Data:** Management views now initialize with safe empty states (showing a - dash instead of crashing) so the UI layout renders perfectly while waiting for API data.

Teacher side

The Teacher interface was streamlined to match the updated requirements.

Start Attendance

- Removed the search bar from the top header.
- Removed the Section input field from the Session Details form.
- The module dropdown, room, practical/theory toggle, and total hours inputs remain functional.

Layout & Header

- The top-right profile section (avatar and user info) is now a clickable button with a hover effect. It routes teachers to the /profile page.

Management side

The Management dashboard was completely restructured for maintainability and visual consistency.

Overview (Overview.jsx)

- Rebuilt with statistic cards (Total Students, Total Tutors, Total Modules, Below 80%) and a Department-wise Attendance table.
- The table includes a "view" link on each row that dynamically routes to the specific Department page.
- Uses placeholder dashes (-) until the API provides real data, preventing blank screens.

Module (Module.jsx)

- **Departments list:** Displays a grid of clickable department cards. Shows "Loading..." while fetching from the API.
- **Department view:** Matches the Figma design with a breadcrumb header, "Back to Dashboard" button, three statistic cards, an SVG trend chart, and a selector box (Year, Module, View button).
- **Module & Student views:** Drill-down views for module details and individual student attendance history.

Teacher (Teacher.jsx)

- Displays the total teacher count and a table of all teachers with their modules, classes, and total hours.

History (History.jsx)

- The History log includes filter inputs (Student ID/Name, Year, Semester, Department) and a results table.
- The History Calendar provides a monthly grid view with color-coded days (Present/Absent).

Admin side

The Admin area was removed entirely from the frontend based on updated project direction.

- The src/pages/admin/ folder was deleted.
- All Admin imports and routes were removed from App.jsx.

- The Admin sidebar navigation and route definitions were cleaned up.

CSS architecture changes

All CSS files were un-minified and separated to match their corresponding JSX files.

- **Overview.css:** Base layout, statistic cards, status chips, and table styling.
- **Module.css:** Department headers, stats cards, trend chart, selector box, and department card grid.
- **Teacher.css:** Base layout and stat card styles.
- **History.css:** Filter bar and calendar grid styles.

Files added and changed

File	New or changed	What it does
frontend/src/App.jsx	Changed	Wires in new Management pages; removes Admin imports; updates profile navigation
pages/management/Overview.jsx + Overview.css	New	Management dashboard with stats and department table
pages/management/Module.jsx + Module.css	New	Department list, drill-down view, module and student details
pages/management/Teacher.jsx + Teacher.css	New	Teacher list view
pages/management/History.jsx + History.css	New	Attendance history log and calendar
pages/admin/*	Deleted	Entire Admin folder removed per updated scope

Next steps and open questions

- ☐

Connect the Management useEffect API calls to the backend so the placeholder dashes (-) are replaced with real database values.

- ☐

Verify the SVG trend chart renders correctly once real trend array data is provided by the API.

- ☐

Confirm whether the "Evidence Document" tab for Management should route to the shared SharedEvidence component or a dedicated Management view.

- ☐

Test the clickable profile navigation for all roles (Student, Teacher, Management) to ensure correct routing.

- ☐

Update the Figma comparison for the Management Overview and Department views to ensure pixel-perfect alignment.

Open question: Should the Management Department view include a "flag" count for students with flagged check-ins, similar to the Teacher Records view?

Summary

The CheckIn frontend is now significantly more modular and maintainable. The Management section, previously a single large file, is now split into four focused components with separated CSS. The Teacher interface has been streamlined, and the profile navigation provides a better user experience. The UI is ready to be connected to the backend API for live data.

Project overview

CheckIn replaces paper attendance registers with a digital check-in. This round focused on the React frontend architecture, specifically the Management and Teacher dashboards, ensuring the code is scalable and the UI is consistent with the Figma designs.

Four kinds of users share one system: students, teachers, the admin (now removed from frontend scope), and management (the Dean of Academic Affairs).

Layer	Technology
Frontend	React 18, Vite 5, React Router, plain CSS (one CSS file per page)
Backend	Node.js, Express, JWT login, bcrypt password hashing
Database	PostgreSQL with Prisma ORM

Frontend: screens built

Role	Screens built
Public	Landing page, student and teacher login, student sign-up
Student	Dashboard, Attendance, Evidence Document, Settings, Edit profile, Change password, My modules, Enrol, Browse modules
Teacher	Dashboard, My Modules, Start Attendance (updated), Attendance Records, Evidence Document, Reports and Analytics, Profile, Settings
Management	Overall view (updated), Department view (updated), Module view, Student view, Teacher list, Evidence review, History table and calendar

Problems solved and issues still open

Problems fixed during this round:

- The Module.css file was missing the .dept-grid and .dept styles, causing a blank screen on the Module tab. These were added.
- Placeholder data (-) was added to all Management stat cards to prevent the app from crashing when the API returns null or is not yet connected.
- The App.jsx imports were updated to match the new separated file structure, resolving Vite import errors.

Still open:

- The Management API calls need to be uncommented and connected to the live backend.
- The SVG trend chart is currently a flat line until the trend array is populated by the database.
- Teacher dashboard updates every 4 seconds via polling, not instantly via WebSockets.

Next steps

1. Uncomment the api() calls in Overview.jsx, Module.jsx, Teacher.jsx, and History.jsx.
2. Verify the backend routes return the expected JSON shape for the Management views.
3. Test the full flow: Overview table → click "view" → Department page → select module → click "VIEW" → ModuleView page.
4. Commit the frontend refactoring work to the feature branch.
5. Open a pull request for review.
