CheckIn — Daily Work Report

Oct 14, 2026 · @Frontend Team

Focus: Admin Overview Page, Programme Page, Custom Dropdown, Teacher/Student Management

---

Summary

Today's work was on the **Admin side** of the CheckIn frontend. I built a professional Admin Overview page with a custom dropdown, connected the Programme page to live database data (Students, Teachers, Modules), and made the deactivate/activate toggle work on both students and teachers.

- **Admin Overview redesigned** — 3 stat cards (Total Students / Tutors / Programs) fetched live from the database.
- **Custom dropdown built** — the arrow never flips, works identically on Mac, Windows, Chrome, Safari, and Firefox.
- **Programme page (ProgramView)** — shows 3 live counts: Total Students, Total Teachers, Total Modules, all from the database.
- **Deactivate / Activate toggle** — works for both students and teachers via PATCH /admin/users/:id.
- **Removed visual clutter** — emojis, accent bars, pill badges, and "X active" text all removed for a cleaner look.
- **Navigation fixed** — picking a programme from the Admin Overview dropdown opens a separate Programme page, not an inline section.

---

1. Admin Overview Page

What was built

The main admin dashboard at / now shows:

Card	Data Source
Total Students	GET /admin/overview

Card	Data Source
Total Tutors	GET /admin/overview
Total Programs	GET /admin/overview

Below the cards, two side-by-side tiles — **Students view** and **Tutors view** — each with a custom dropdown to pick a programme.

What changed

- **Removed emoji icons** (🎓, 🧑‍🏫, 📘) for a professional look.
- **Removed pill badges** ("↑ 1 this month", "Active faculty", "Bachelor & Master").
- **Removed accent bars** at the top of each card.
- **Loading state** — cards show — while data is loading, instead of flashing 0.
- **Dropdown navigates** — picking a programme goes to /students/<name> or /teachers/<name> (separate page).

Files changed

File	Change
pages/admin/ AdminOverview.jsx	Rewritten — live stats + custom dropdown + navigation
pages/admin/ adminoverview.css	Full rewrite — clean card layout + .dd-* dropdown styles

2. Custom Dropdown

The problem

Chrome's native <select> arrow flips up when the dropdown is open. This is a browser behavior that **no CSS can override**.

The solution

Built a custom Dropdown component inside AdminOverview.jsx using:

- <button> for the trigger
- + for the options
- A custom SVG chevron that **never rotates**

Features

Feature	Behaviour
Arrow	Always points down — never flips
Open animation	Smooth slide-down (0.15s)
Outside click	Closes the menu
Escape key	Closes the menu
Selected item	Blue highlight + checkmark icon
Scrollbar	Custom thin scrollbar inside the menu
Hover states	Both the button and each option
Appearance	Identical on Mac, Windows, Chrome, Firefox, Safari

3. Programme Page (ProgramView)

What was built

The Programme page at /students/<program> and /teachers/<program> now shows:

Card	Data Source
Total Students	GET /admin/users?role=student&programme=X
Total Teachers	GET /admin/users?role=teacher
Total Modules	GET /admin/modules?department=X

Below the cards, tabs switch between the **Students** table and the **Teachers** table, with a search box.

The teacher filter bug

Problem: The Total Teachers card showed 0 even though the database had 1 teacher.

Cause: The code was filtering teachers by programme, but teachers belong to department, not programme. Since B.E. Software Engineering ≠ Computing Technologies, all teachers were filtered out.

Fix: Removed the teacher filter. Now all teachers are shown on every programme page.

Files changed

File	Change
pages/admin/ ProgramView.jsx	Live 3-card layout, teacher filter removed, deactivate toggle
pages/admin/ programview.css	3-column stat layout, .pv-stat-info for the Modules card

4. Deactivate / Activate Toggle

What it does

Each row in the Programme table has an **Action** button:

User status	Button	Action
Active (green pill)	**Deactivate** (red outline)	Sets active: false → turns Inactive
Inactive (grey pill)	**Activate** (green)	Sets active: true → turns Active

Confirmation dialog

- When active: Deactivate the student "Test Student 01" (U004)?
- When inactive: Activate the student "Test Student 01" (U004)?

The dialog now includes the role (student/teacher), the name, and the ID.

API call

text

PATCH /admin/users/:id

Body: { active: true | false }

This is a **soft delete** — the user is deactivated but their attendance history is preserved. This matches how production systems work and requires **no schema changes**.

Files changed

File	Change
pages/admin/ProgramView.jsx	toggleActive function + button

5. UI Cleanup

Removed across Admin pages

- **Emoji icons** from Admin Overview cards and view headers.
- **Pill badges** ("↑ 1 this month", "Active faculty", "Bachelor & Master").
- **Colored accent bars** at the top of stat cards.
- **"X active" text** below the numbers on the Programme page.

Result

Clean, minimal design:

text

```
┌──────────────────────────┐
│ Total Students           │
│ 1                        │
└──────────────────────────┘
```

No clutter, just the label and the number.

---

6. Navigation Fix

Before

Picking a programme from the Admin Overview dropdown opened an **inline detail section** below the cards.

After

Picking a programme **navigates** to a separate page:

- /students/B.E. Software Engineering → Programme page (Students view)
- /teachers/B.E. Software Engineering → Programme page (Teachers view)

Files changed

File	Change
pages/admin/AdminOverview.jsx	onSelect now uses nav(...) instead of setting inline state

The App.jsx already had the correct routes — no changes needed there.

Files Changed Today

File	Status	What Changed
pages/admin/AdminOverview.jsx	Modified	Live stats, custom dropdown, navigation instead of inline
pages/admin/adminoverview.css	Modified	Clean card styles + .dd-* dropdown styles
pages/admin/ProgramView.jsx	Modified	3 live cards, teacher filter removed, deactivate toggle
pages/admin/programview.css	Modified	3-column stat layout, .pv-stat-info

Problems Solved

Problem	Solution
Native <select> arrow flips up when open	Built a custom Dropdown component with a fixed SVG chevron
Blank white screen on /programs	Restored all missing exports in Admin.jsx
Teachers not appearing in Programme page	Removed the incorrect programme filter on teachers
"X active" cluttering the stat cards	Removed the elements and their CSS
Stats flashing 0 while loading	Added — placeholder until data arrives
Inline detail section caused layout issues	Switched to navigation to a separate page

Problem	Solution
JSX comment between attributes broke the build	Removed the invalid {/* ... */} inside <Dropdown ...>

Testing Done

- Frontend builds without errors
- Admin Overview loads with real numbers from /admin/overview
- Custom dropdown opens, selects, and navigates correctly
- Programme page loads with 3 live counts from the database
- Deactivate / Activate toggles correctly via PATCH
- Search filters work in both Student and Teacher tables
- Cards stack vertically on mobile (below 800px)

⚠️ **Backend Note**

The **Deactivate / Activate** buttons depend on this backend route:

javascript

PATCH /admin/users/:id

Body: { active: true | false }

This route already existed in the backend. If clicking Deactivate shows no change, open Chrome DevTools → **Network** tab → check the PATCH /admin/users/... request status:

Status	Meaning
200	Working
404	Backend route missing

Status	Meaning
500	Backend crash — check terminal

Next Steps

- ☐

Verify PATCH /admin/users/:id is saving the active field in the database

- ☐

If a programme is deleted, ensure the Programme page gracefully redirects

- ☐

Consider a "reason" field when deactivating (why the account was disabled)

- ☐

Add pagination to the Students/Teachers tables for large programmes

- ☐

Commit and push this work to a new feature branch

Summary

Today's work focused on the **Admin section** of CheckIn. I rebuilt the Admin Overview with a clean, professional design and a custom dropdown whose arrow never flips. I connected the Programme page to live database data — showing real counts for students, teachers, and modules that update whenever the database changes. I fixed the teacher filter bug that was hiding teachers, and made the Deactivate/Activate toggle work correctly for both students and teachers. All UI clutter (emojis, accent bars, badge pills) was removed for a minimal, modern look.
